

HTET AUNG LWIN

Front-End Developer

Yangon, Myanmar | htetaunglwin.canon@gmail.com | +95264982456

<https://htetaunglwinportfolio.netlify.app/>

Summary

Front-end developer specializing in React, skilled in building responsive, and user-friendly interfaces with Tailwind CSS. Experienced in state management, component-based architecture, and API integration. A collaborative developer who can work seamlessly with designers and engineers.

Projects Experience

Randomly - News Website

Client: React, Tailwind CSS | Server: Node.js | Hosting: Render, Netlify

<https://github.com/HtetAungLw1n/Randomly.git>

- **Authentication:** Users can register and login to engage with the website as visitor or admin.
- **API Integration:** Fetch news from APIs and integrate with the backend. Handle data fetching and state management using React Loaders and Actions.
- **React Router Dom:** Enable efficient route navigation within the application.
- **CRUD Operations:** Each news articles and user accounts can be managed with CRUD.

MSM - Mini Social Media Website

Client: HTML, Tailwind CSS | Server: PHP, MySQL

<https://github.com/HtetAungLw1n/mini-social-media.git>

- **Authentication:** A secure sign up, login and logout system with front-end and back-end validation.
- **Account Management:** Users can manage their username and password, which are securely stored in database.
- **Features:** Users can post, comment, and use the search functionality.

Taiju - Link Collection Website

Client: React, Tailwind CSS | Server: Firebase

<https://github.com/HtetAungLw1n/Taiju.git>

- **Authentication:** A secure sign up, login and logout system with Firebase authentication.
- **Storage & Management:** Add new link and title using useState Hook and React Router Dom's Form. The links are stored in Firebase's Real Time Database.
- **Real-Time Updates:** UI updates instantly based on Firebase data through API calls.

Medi-Cart - Online Shopping Cart Website

Client: React, Tailwind CSS

<https://github.com/HtetAungLw1n/medi-cart.git>

- **React Context:** Passing items through react context and useReducer hook.
- **React Hook:** View total price and quantities dynamically using useState and useRef.
- **Search Functionality:** Find medicines quickly using search bar input.
